

**Release Notes  
PAWS WRTS  
Version 01.35.01  
02 March 2007**

**1.1 Critical Items**

**1.2 Known Limitations**

**1.3 Enhancements**

**1.4 Problem Reports**

1.4.1 PR 07003

The internal problem report related to error messages displayed from the CEM module has been fixed.

1.4.2 PR 07008: COM Info displayed when LiteDebugger loads a fresh PAX file

The COM Info:

"COM Info: 0x80020009 Unable to read file C:\Project\LEXDB.LEX. Chromacoding information has not been retrieved successfully."

was displayed when the LiteDebugger loaded a PAX file that had not been previously unzipped.

This information is shown now only when the user displays a source files, and the LexDB.LEX file is missing. This information is not shown anymore when the user loads a PAX file. This fix postpones the loading of the chromacoding information until the user intends to open a source file. Please see the source files of this application for more details.

1.4.3 PR 06129: Graphics Viewer characters not displayed distinctly

The problem was fixed with a new version of the Graphics Viewer 3.8.

1.4.4 PR 07015: Formatting problem in CASS OUTPUT Statements

The RTS adapters have been enhanced to recognize and deal with FORTRAN formatting.
