**1.0 Overview**

The following sections outline critical information needed to use this release of the ATLAS Flowcharter (9504) and ATLAS Test Strategy Flowcharter (9614).

**1.1 Critical Items**

**1.1.1 Java Runtime Environment (JRE), version 1.1.6**

The JRE, version 1.1.6, which is needed for the Flowcharter to function, can be obtained directly from Sun's Java Web site:

<http://java.sun.com:80/products/jdk/1.1/jre/index.html>

The JRE is in the form of a self-installing executable file. After installation, ensure that javai.dll is included in the path. The default location is C:\Program Files\JavaSoft\JRE\1.1\bin.

**1.1.2 Winsock 2**

Winsock 2 is the current version Microsoft's TCP/IP socket communications service. TYX Flowcharters require this service to be correctly installed and configured on all Windows NT and 95 systems that are used with the TYX Flowchart processors.
